

innovative and truly sustainable

The Universal LED Module (ULM) is a revolutionary approach to sustainable lighting solutions. We have designed our ULM to accept various LED emitters, just like traditional luminaire and lamp ideology, so you choose your preference of LED emitter for your application. It can also be replaced or upgraded without replacing the whole luminaire. The ULM insert is also modular, so it can even be interchanged with other same size inserts from Whitegoods, a gimbal insert for example.

	XICATO			BRIDGELUX			FORTIMO			PRIVALED
