

ProTools Downlights

whitegoods

whitegoods

Whitegoods has developed another range of minimal lighting tools, which utilize the form factor of LED to reduce even further their visual impact, and of course they all hold true to our constant principles.

Our Philosophy

- Reduction of detail
- Seamless architectural integration
- Logical, modular systems and families of products
- Ease of specification, installation and maintenance

ProTools Range Modularity

The ProTools range of professional lighting tools has been developed as a flexible and adaptable system.

One unified range can meet the demands of all spaces within a project, from the simplest requirements to the most demanding, all with a genuinely matching aesthetic appearance.

Frame

Select from Plaster Trim or Bezel Trim. Once the mounting frame is fitted, it can accept any insert within the range, all of which can be installed and accessed from below.

The same is true for their driver box.

Insert

Choose the insert to suit your needs:

- Simple ambient light from the D insert.
- Various beam angles from fixed or adjustable.
- Ultimate performance, superb glare control, lens options and a unique void shielding system with the DLX insert.

Cover

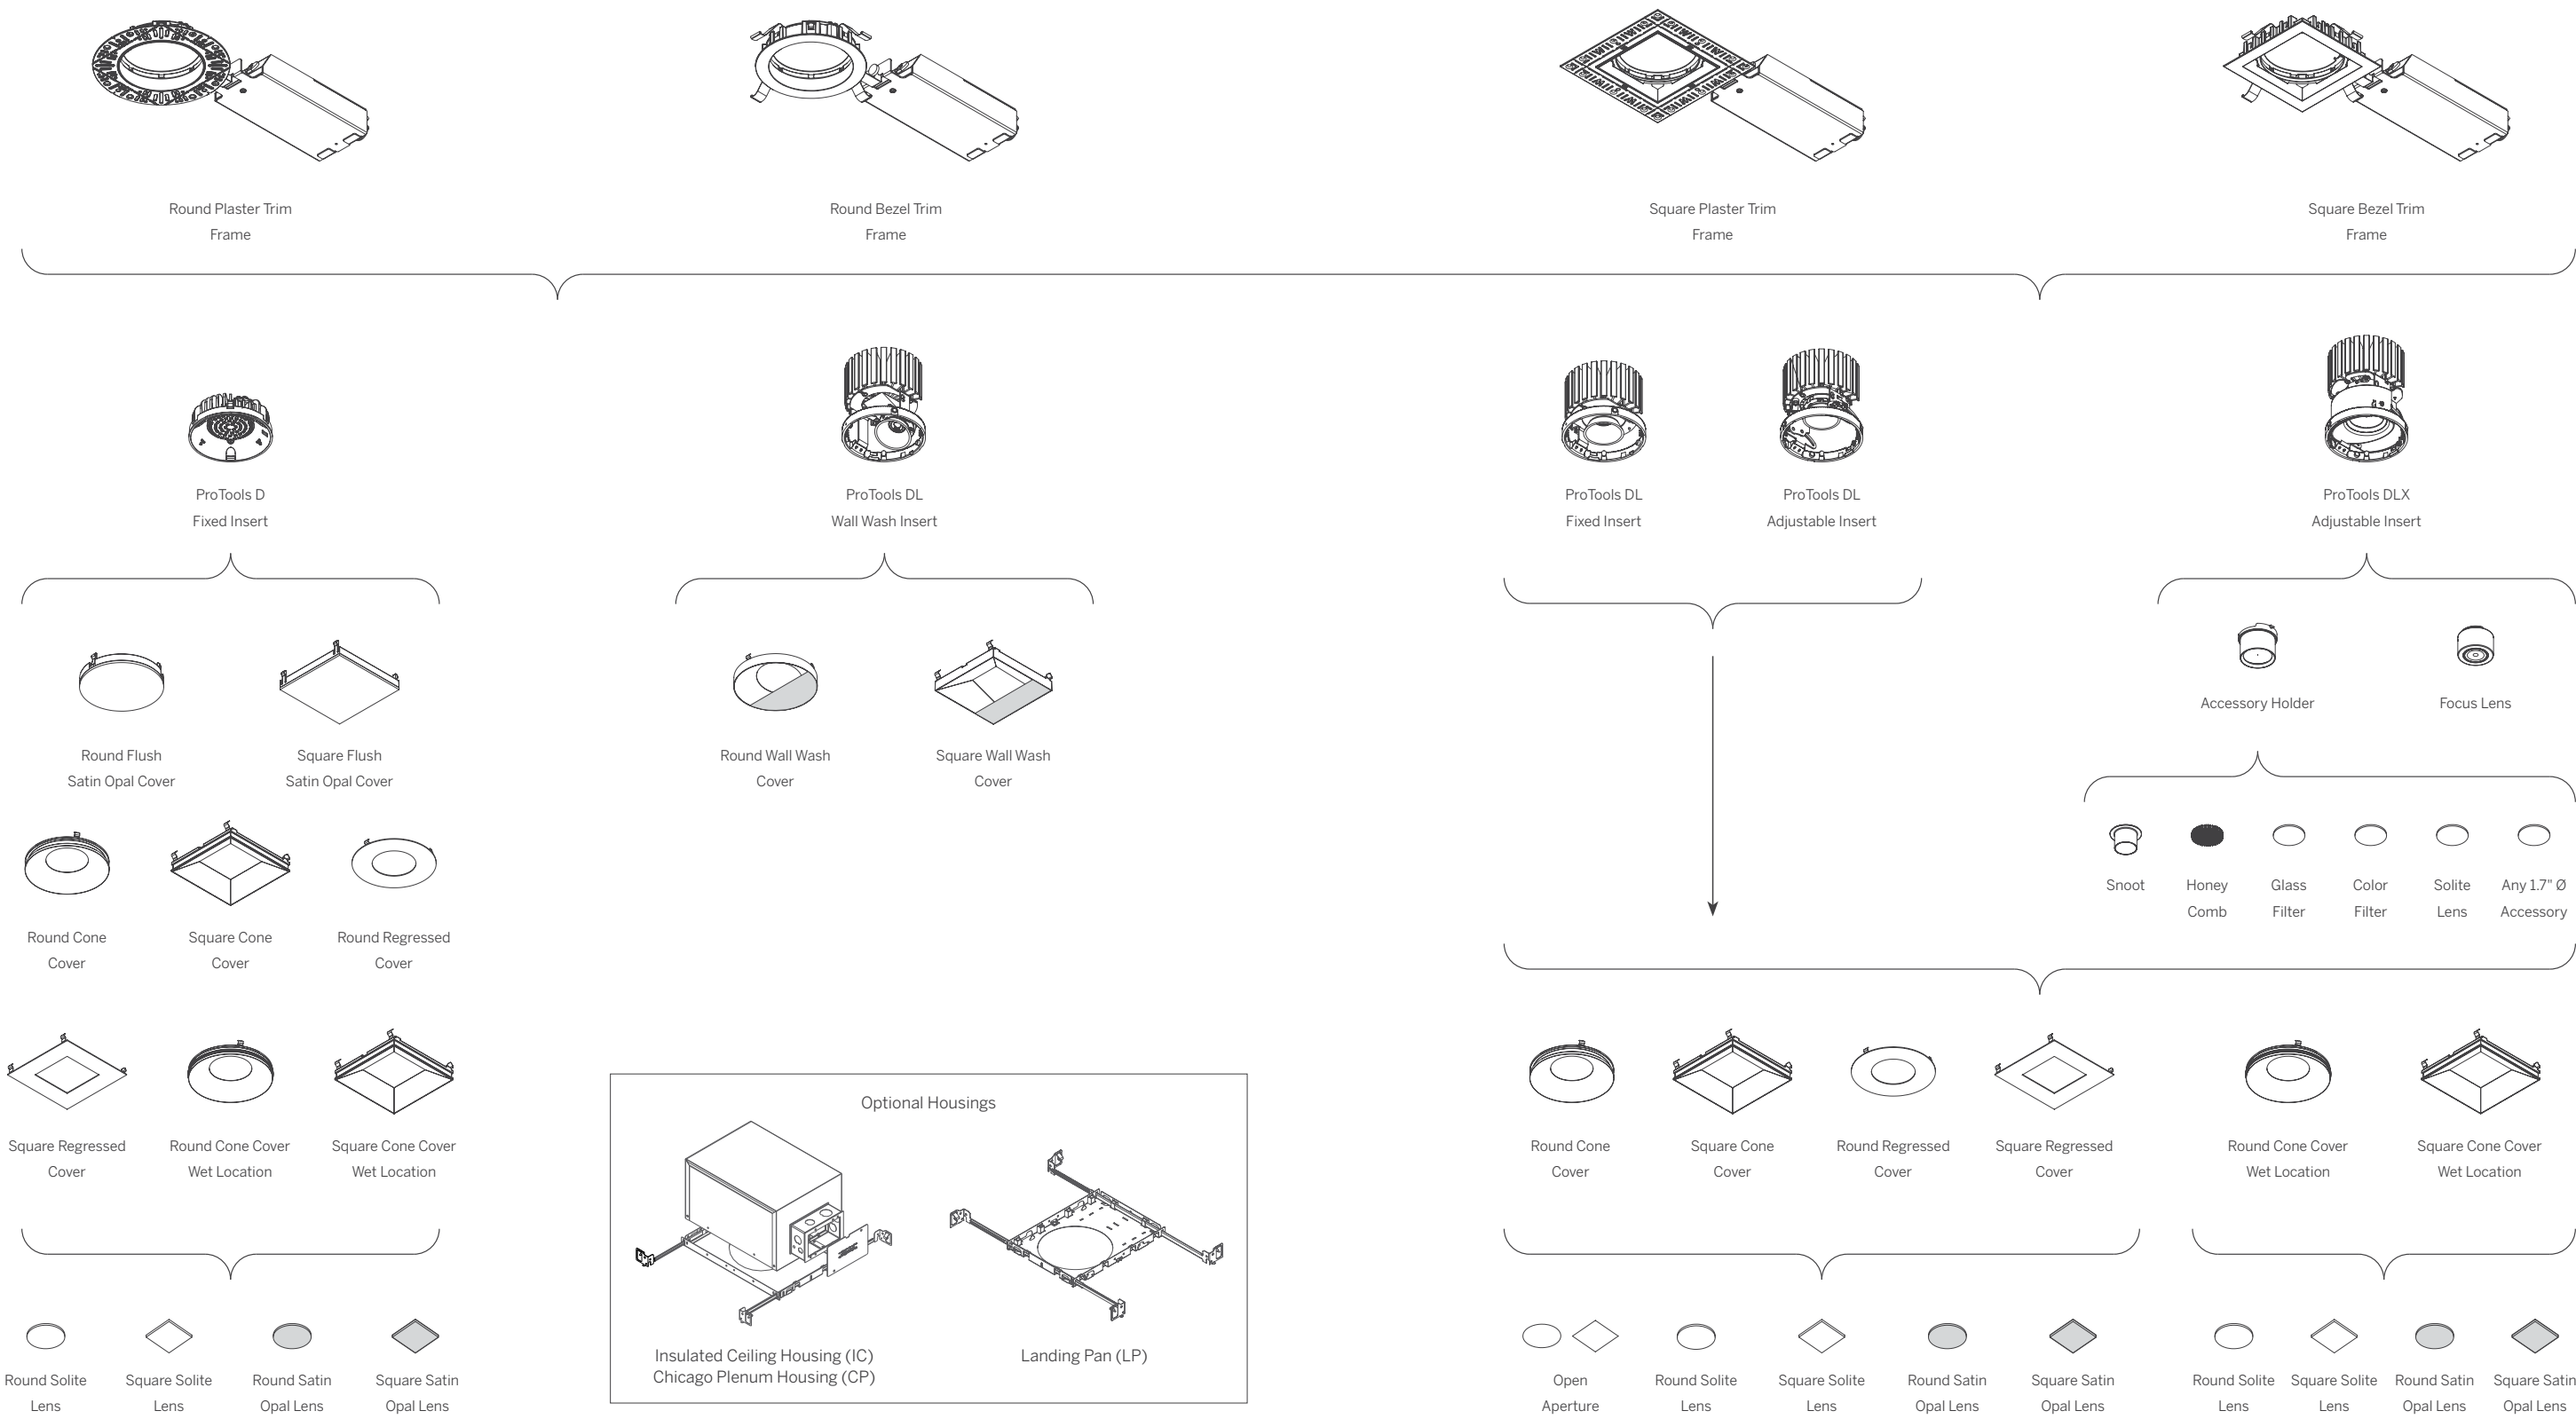

Complete with your choice of cover:

- Flush Satin Opal
- Regressed Cone
- Wall Wash
- Regressed Pinhole
- Wet Location

ProTools Range Logic

The ProTools range allows the specifier freedom to design for all spaces and environments within a project from one succinct, logical and aesthetically congruent range of luminaires. The comprehensive options cover all of the designer's needs.

ProTools Aim Stick & Aim Stick Laser

"Hot aiming" has been a buzzword in the lighting industry for decades. However, these days, it is something of a misnomer, as luminaires with LED technology run much cooler than their predecessors. Moreover, the traditional requirement for "lockable" fixtures related to the fact that their carefully aimed position would inevitably be disturbed during re-lamping every few thousand hours. The locking mechanism was there to minimize this. As LEDs will now more than likely outlast the serviceable life of an installation, this requirement is redundant. Market leading COB LEDs mean that, once set, the luminaire is unlikely to need servicing.

Instead, we have ensured that the position of our adjustable downlights is "fixed as set" by default. The 365 degree rotation is incrementally defined by a spring-loaded ratchet system, ensuring that the position achieved is fixed the moment it is set. The aiming angle is likewise held fast by four, factory torque set, friction points.

Whitegoods products are designed with input from lighting designers who have years of real life, first hand experience of specifying and using luminaires of all kinds. We know that construction sites can be difficult places to work. Focusing a project when the BMS or lighting control system is also being commissioned can mean wasted hours waiting for the lights to come on. With ProTools the designer can focus the project with lights on or off, utilizing the unique aiming stick with laser sight, allowing total confidence that the luminaire will hit its target.

If you don't have one on hand, don't worry. A long thin screwdriver can be used to do the same job, albeit without the laser aiming of course.

ProTools Aim Stick

ProTools Aim Stick Laser

1

Gently insert the edge of the Aim Stick into the gap between the housing and the cover.

2

Lever out the cover.

3

Remove the cover.

4

Locate the designated hole for the tool. Insert the ProTools Aim Stick into the housing and screw in a few short twists.

View from under the ProTools DLX.

The designated hole for the Aim Stick is highlighted in yellow.

5

Activate the laser by rotating the black dial on the bottom of the Aim Stick clockwise.

6

Use the tool to rotate the direction of the beam to the desired point. The ProTools DLX can rotate 365° and has a tilt of 45°, the ProTools DL Adjustable can rotate 365° and has a tilt of 40°.

Once the required adjustment has been made, repeat steps 3-6 in reverse.

The ProTools 4" downlight family offers trimless and trim, round or square, ambient light, or adjustable, wall washers, ultimate performance, superb glare control, lens options and the Whitegoods attention to integration with surrounding materials.

Made in the USA and in stock in Maryland.

ProTools Applications

Downlight

Perhaps the most common lighting solution utilized for general area lighting, arranging a group of lights in a grid to give even illumination to the surface below.

Of course, the popularity of a technique is not always a sign of best practice, and in this case it typically has more to do with economy and ease of implementation.

However, when applied to a space with some consideration it can be an effective technique. One thing to consider for this type of solution is "how much light will fall on the walls?". A space can have a lot of light being delivered into it, but if the walls are not sufficiently illuminated, there is a good chance that the space will feel gloomy, even though there is plenty of light falling on horizontal surfaces like desks or the floor.

Fortunately, many Whitegoods luminaires have good 'high angle distribution', which can help to deal with this common issue.

Tip

Look for Whitegoods product codes that include "D", "DL", or "DLX" to find downlights.

Washlight

The aim of wall washing, or in fact washing any surface with light (wall, ceiling or floor), is to create an even 'wash' of light across the surface. The wall wash is a great way to introduce light into a room as the brightness of the vertical surfaces around us play a crucial role in our perception of a space. You can use linear or point sources, and both will need to emit a wide, even beam of light which is directed towards the wall, to create the effect.

Downlights need to be correctly positioned, both in terms of distance from the wall, and their relative distance to one another. There are helpful guides for this in the Design Guide section of this book. Linear sources also need careful placing in terms of their offset from the wall, and can be used in a continuous format, or as a series of linear elements. A continuous linear source will achieve the most consistent overall effect, although downlights might better suit the architecture or construction method.

Tip

Look for Whitegoods product codes that include "WW" throughout this book to find wash lights.

Adjustable

Of course, although considering whole surfaces is a highly effective way to start thinking about light within your project, it is equally possible to think in terms of specific pieces of architecture, art, sculpture, ornamentation or furniture, and treat these as focal objects, drawing the viewers attention to them naturally and simply by highlighting them against their background scenario.

A useful 'rule of thumb' here is that if you allow ten times more light to fall on an object relative to the surrounding light level, it will seem to be 'popping' out of the scene and will tend to draw the eye.

Tip

Look for Whitegoods product codes that include "DL" or "DLX" throughout this book to find products suitable for highlighting focal objects.

4" ProTools D Downlight

Square Flush Diffuser

High-Angle Distribution Ambient Lighting

- 4" aperture square downlight for wide distribution ambient lighting.
 - High angle distribution giving good vertical illumination.
 - High transmission, evenly illuminated Flush Satin Diffuser.
 - Beam Angle: Lambertian
 - Luminaire and driver installed and maintained from below the ceiling.
- Integral or remote driver.
 - Mounts in 1/16" to 1" surface.
 - Minimum of 5.5" (127mm) ceiling void is required to install the fixture from below the ceiling (integral driver).
 - Modular interchangeability throughout the entire ProTools DLX range of products.

- 3 See LED data sheet for delivered lumens.
- 4 See power supply page for details.
- 5 Plaster trim version includes white frame and gray cover.

4" ProTools D Downlight

Round Regressed Pinhole Cover

Even Illumination From Regressed Lens

- 4" round aperture downlight with wide distribution ambient lighting.
- 0.7" regressed, evenly illuminated, highly efficient Satin Opal Diffuser providing good glare control.
- High efficiency, high transmission diffuser.
- Beam Angle: 110°
- Luminaire and driver installed and maintained from below the ceiling.
- Integral or remote driver.
- Mounts in 1/16" to 1" surface.
- Minimum of 5.5" (127mm) ceiling void is required to install the fixture from below the ceiling (integral driver).
- Modular interchangeability throughout the entire ProTools DLX range of products.

4" ProTools DL Adjustable

Round Regressed Cone Cover

Multiple Beam Options With Pan And Tilt Adjustment From Regressed Source

- 4" round downlight with 2" light aperture.
- 0.7" regressed aperture / lens position provides good glare control.
- Beam Angle: Various, Cut Off: 35°.
- Open aperture, clear lens or high transmission diffuser.
- Luminaire and driver installed and maintained from below the ceiling.
- Integral or remote driver.
- Mounts in 1/16" to 1" surface.
- Minimum of 5.5" (127mm) ceiling void is required to install the fixture from below the ceiling (integral driver).
- Modular interchangeability throughout the entire ProTools DLX range of products.
- Wet Location as standard option (WL).
- Tilt 40°, Rotation 365°.

Options
ProTools downlights require no additional options kits for remodel & new construction

- LP = Landing Pan
- CP = Chicago Plenum Housing
- IC = IC/NC Housing
- WL = Wet Location

Optical Accessory Holder (Must be ordered separately)

Up to 3 lenses and/or accessories can be added to the Optical Accessory Holder

- SN = Snoot
- HX = Hex Louver
- FG = Frosted Glass
- LS = Linear Spread Lens
- SOL = Solite Lens

Whitegoods reserves the right to change any information without prior notice.

- Notes**
- 1 Other lumen packages available, consult factory.
 - 2 Wattage shown does not include power supplies/drivers. System wattage adds 10-20%.
 - 3 See LED data sheet for delivered lumens.
 - 4 See power supply page for details.
 - 5 Plaster trim version includes white frame and gray cover.

4" ProTools DLX Downlight

Square Regressed Cone Cover - Narrow / Zoom

Full Featured With Accessory Holder And Ceiling Void Light Leak Hood

- 4" square downlight with 2" light aperture.
 - Regressed aperture / lens position provides good glare control.
 - 8° very narrow beam and zoom options.
 - Open aperture, clear lens or optical accessory lenses.
 - No light leak or view into ceiling void from below due to a unique light leak hood.
 - Luminaire and driver installed and maintained from below the ceiling.
- Integral or remote driver.
 - Mounts in 1/16" to 1" surface.
 - Minimum of 5.5" (127mm) ceiling void is required to install the fixture from below the ceiling (integral driver).
 - Modular interchangeability throughout the entire ProTools DLX range of products.
 - Tilt 45°, Rotation 365°.
 - Wet Location option as standard (WL).

- SN = Snoot
- HX = Hex Louver
- FG = Frosted Glass
- LS = Linear Spread Lens
- SOL = Solite Lens

Whitegoods reserves the right to change any information without prior notice.

Notes

- 1 Other lumen packages available, consult factory.
- 2 Wattage shown does not include power supplies/drivers. System wattage adds 10-20%.
- 3 See LED data sheet for delivered lumens.
- 4 See power supply page for details.
- 5 Plaster trim version includes white frame and gray cover.

4" ProTools DLX Downlight

Round Regressed Pinhole Cover

Full Featured With Accessory Holder And Ceiling Void Light Leak Hood

- 4" round downlight with 2" light aperture.
 - Regressed aperture / lens position provides good glare control.
 - Beam Angle: Various, Cut Off: 30°.
 - Open aperture, clear lens or optical accessory lenses.
 - No light leak or view into ceiling void from below due to a unique light leak hood.
 - Luminaire and driver installed and maintained from below the ceiling.
- Integral or remote driver.
 - Mounts in 1/16" to 1" surface.
 - Minimum of 5.5" (127mm) ceiling void is required to install the fixture from below the ceiling (integral driver).
 - Modular interchangeability throughout the entire ProTools DLX range of products.
 - Tilt 45°, Rotation 365°.

Design Guide

We have provided performance data and characteristics for Whitegoods luminaires, as well as providing expected light levels for typical scenarios based on set parameters. The results are intended as a handy reference to help the specifier plan their project quickly, efficiently and with confidence.

We have taken the most common uses of each luminaire type, set distances and heights based on typical situations and calculated the results. Then, we vary the parameters a little either way so that you can decide for yourself the best option for your particular requirement.

4" ProTools Single Downlight - Performance

WG 100SPTD, WG 100RPTD, WG 100SPTDL, WG 100RPTDL, WG 100SPTDLX, WG 100RPTDLX

The ProTools series offers Plaster Trim and Bezel Trim fixed, wall wash and adjustable downlights with various cover options and accessories creating a flexible and versatile range of luminaires with a single consistent minimal appearance throughout.

A downlight can be used to deliver general light over a broad area, or a focused beam of concentrated light. Suitable for general area lighting in single units, grid patterns or groups as well as focused lighting and task oriented application.

This design guide provides the average light levels and beam spread which can be expected at task and floor level from a single downlight at the ceiling heights shown, and relative to the performance of each luminaire.

Refer to the diagram on the left, select your luminaire, ceiling height and distance, and read off the light level achieved in the table below.

Calculated on the following basis:

Reflectances

- Ceiling 70%
- Walls 50%
- Floor 20%

Maintenance factor

1.0

LED

- High Power
- 3000 Kelvin
- 90 CRI

How to create 'Even Illumination' in a space:

The beam angle of a single luminaire is defined by its Half Peak Intensity*. We can use this to create even illumination in a space.

Arrange luminaires equally. Use the center of the luminaire as a base and ensure that neighboring beam spreads touch or slightly overlap.

*The point at which the beam reaches half of the intensity relative to the center of its beam.

Average Light Levels

The diagram shows the average light level achieved, across an area the size shown, at the given distance from a single luminaire.

Product Code	Beam Spread	
WG 100SPTD, WG 100RPTD	-	90°

4" ProTools D Downlight - High Angle Illumination

WG 100SPTD, WG 100RPTD

The ProTools D is a versatile luminaire with various trim, diffuser and cover options. When specified with a flush Satin Opal Diffuser, it has excellent high angle lighting performance. Although it is not intended as a dedicated wall wash luminaire, it can provide excellent illumination to nearby vertical surfaces as well as providing excellent ambient light throughout a space.

In this Design Guide, we provide you with all the information you need to work out exactly how much light can expect to deliver to a wall and floor below, relative to the distance from the surface and the center to center spacings of the luminaires.

Angle of Illumination / High Angle Lighting Performance

WG 100SPTD, WG 100RPTD

The diagrams show the point at which the contrast between the lit and the unlit perpendicular surface occurs as a soft transition line, at various distances from the luminaire.

Values in feet & inches

9' Ceiling, Typical 36" Offset, 36" Luminaire Spacing

This page shows typical offsets and luminaire spacings and the resulting illumination which can be expected on the wall and floor. The following page shows results at different offsets and luminaire spacings.

4" ProTools DL Wall Wash

WG 100SPTDLWW-RPT, WG 100SPTDLWW-RBT, WG 100RPTDLWW-RPT, WG 100RPTDLWW-RBT

ProTools DL Wall Wash offers round and square dedicated wall wash luminaires for even illumination of a surface. They emit a wide, even beam of light which is directed towards the wall. Washlights need to be correctly positioned, both in terms of distance from the wall, and their relative distance to one another. This guide will help you get the best result.

The golden rule is 1:1 spacing between luminaires, set to match the distance they are offset from the surface to be lit. And that offset distance should ideally be one third of the overall surface height.

Of course, at Whitegoods we understand that constraints of modern construction requirements and commercial consideration mean that it is not always practical to apply these parameters. Therefore we have designed our wall wash luminaires to work as well as possible even when mounted close to the wall.

The height of the wall to be lit (h) will determine the best distance at which to position wall wash luminaires. A good 'rule of thumb' is to offset them by approximately one third of the wall height.

For optimum wall washing results use a 1:1 ratio between the offset (a) from the wall and the 'on center' luminaire spacings (b).

e.g. - if the wall is 9' high, then the luminaires will ideally be 3' away from the wall surface, so set them out at 3' on center - i.e. with 3' between each luminaire.

Also, where the wall meets an adjacent surface, space the last luminaire half the set out distance (b¹).

12' Ceiling, 36" Offset, 36" Luminaire Spacing

This page shows what we feel are the optimal offsets and luminaire spacings to achieve even illumination. The following page shows results at different offsets and luminaire spacings.

The application of light to the surfaces around us is a critical factor in our perception of any space.

When proper consideration is given to the architecture, function and the desired atmosphere, lighting can become a truly integrated part of the overall environment being created, often unseen although defining and enhancing the space.
