Periskop

The Periskop outdoor family of flood lights represents a versatile landscaping solution for trees, bushes, and sculptures, as well as building facades. Periskop is available in multiple sizes and optics (including unique Hyper Spot and Ultra Spot beams for dramatic effects), with multiple installation solutions available and a selection of accessories to control and shape the beam to your desire.

Anti-glare accessories, made of black painted aluminum, reduce light glare.

Periskop 1.8" Fixed (6W)

Spot (14°) Flood (28°) Wide Flood (50°) Narrow (11°)

Periskop 3.2" Fixed (9.5W)

Spot (15°) Flood (38°) Wide Flood (50°) Vert. Ellipt. Spot (15°x41°) Horiz. Ellipt. (41°x15°) Vert. Flood (33°x43°) Horiz. Flood (43°x33°)

Fixed Honeycomb (9.5W)

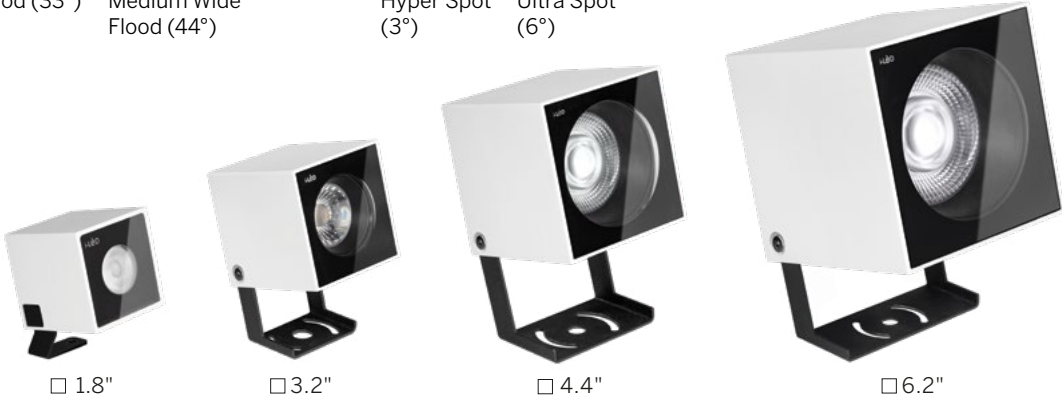

Spot (14°) Flood (33°) Medium Wide Flood (44°)

Narrow Beam (2W / 8W)

Hyper Spot (3°) Ultra Spot (6°)

Iris 67

Iris 67 is a family of outdoor flood lights that provides one of the most flexible landscape lighting solutions for trees, bushes, sculptures and building facades. Iris 67's main feature, the Zoom optics, is standard on every size. A Zoom Symmetric option allows quick and easy adjustment of the beam spread from 15° to 62°. While the Zoom Elliptic solution adds additional adjustability to beam spread, an outstanding beam shaping option. Two Zoom options make Iris 67 the most versatile lighting solution, all in one fixture. And an IP67 rating for temporary submersion makes this flood light unique in its category.

Iris 67 ZOOM SYMMETRIC

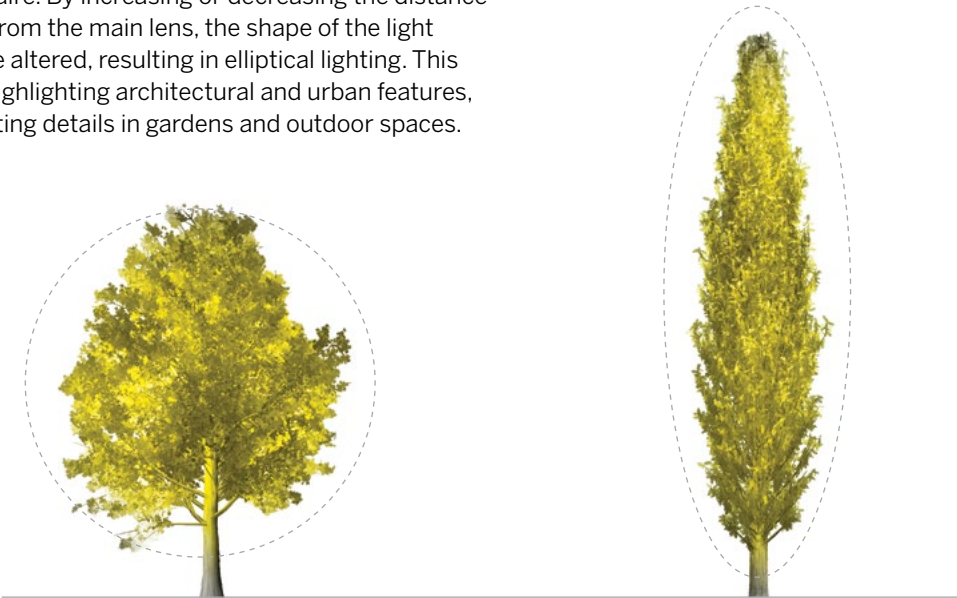

Iris 67 allows the beam to be adapted to the targeting requirements in outdoor environments. The adjustable ring nut makes it possible to calibrate the beam width, which varies according to the model chosen, making targeting easy and accurate. The simplified focus clamping system allows for a beam width that exactly matches the gradient marked along the bezel.

1.6" / 6W / 630mA 2.4" / 13W / 350mA 3.2" / 20W / 580mA 3.9" / 30W / 840mA

Iris 67 ZOOM ELLIPTIC

The Iris 67 Elliptic allows the beam width to be adjusted accurately by rotating a specially-designed ring nut. A second ring nut moves a filter, which is located at the end of the luminaire. By increasing or decreasing the distance of the filter from the main lens, the shape of the light beam can be altered, resulting in elliptical lighting. This is ideal for highlighting architectural and urban features, or accentuating details in gardens and outdoor spaces.

1.6" / 6W / 630mA 2.4" / 13W / 350mA 3.2" / 20W / 580mA 3.9" / 30W / 840mA
