light has new **SKIN**

The brand new elongated hexagonal shape makes it easy to create continuous linear compositions, suitable for following and lighting the complex or misaligned silhouettes of modern architecture.

DOING AWAY WITH STANDARD DESIGNS BY ADAPTING TO THE ARCHITECTURE

We have designed Skin by imagining a flexible, original and high-performance light fixture that gives architects and lighting designers the freedom to go beyond linear or spotlight-type lighting set-ups. The beauty of this three- or five-cell light fixture lies in its original look and perfect modularity. Skin makes it easier to create straight, curved or undulating series while maintaining a perfect line plus an excellent continuity of light through the combination of the different types.

BEAUTIFUL AND FUNCTIONAL SKIN

Skin Optics Surface / Recessed

Gold cells
Black screen-printed glass
Version with 5/3 cells
Optics: Spot, Flood, Wide Flood

Skin Optics Surface / Recessed

Black cells
Black screen-printed glass
Version with 5/3 cells
Optics: Spot, Flood, Wide Flood

Skin Optics Surface / Semi-Recessed

Opaline cells
Sandblasted glass
Version with 5/3 cells
Optics: Spot, Flood, Wide Flood

Skin Wall Washer Surface / Recessed

Metallic cells
Black screen-printed glass
Optics: Asymmetric

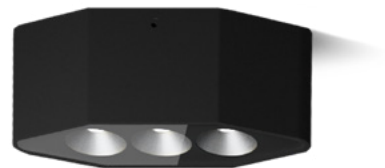

AN APPLICATION FOR EACH VERSION

Skin comes in various installation configurations: ceiling-mounted, semi-recessed and flush-fit. With two types of outer casing, it is easy to position according to the project requirements with a choice of different light distribution. Skin has an IP67 protection rating and an extremely strong structure with an impact rating of IK10 (6.5 inch version) and IK08 (8.7 inch version). The combination of these elements means that Skin is perfect for precise and accurate design requirements.

A LIGHT FOR EVERY PROJECT

Skin is available with 3 or 5 sources (length: 6.5 and 8.7 inch) and various optics: spot, flood and wide flood, asymmetric wall-washer and path-marker white diffuser, power settings that range from 2.5W to 18W. A complete technological package, designed to meet all the needs of even the most demanding designer.

TOTAL FLEXIBILITY AND BLENDING IN

Skin takes the concept of flexibility to another level through the innovative template that allows the continuous installation of the individual modules positioned at precisely angled step (one every 10°).

Thanks to the template provided with every recessed fixture, Skin modules can be precisely installed to create a perfect curve or circle.

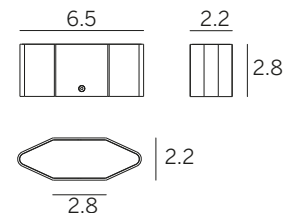

Skin lets you have fun with lighting. This collection has been conceived and designed to go beyond standard linear or spot lighting.

ASYMMETRY MAKES THE DIFFERENCE

In the version with uplight asymmetrical optics, the beam is more open, allowing a greater light diffusion on the ceiling, an effect that is amplified in vaulted rooms; in the downlight version, the beam is narrower and the recessed optics maximise visual comfort, also thanks to the recessed cell optics.
